### **ABSTRACT:**

*The main purpose of the study is to highlight the adjustment and academic achievement Problems among the school students in Balochistan. Twenty primary girls school were selected from District Mastung. A self-made questioner was administrated to teachers of schools, and principle The sample consisted of 250 people. The data collected through a self made questionnaire was analyzed by using descriptive statistics where frequencies and percentage were drawn. Significant problems were found in adjustment and academic achievement among the students at school level. The level of adjustment of secondary school students is average. Girls possess better adjustments than boys.*

**Keywords:** Adjustment, Academic Achievement, Adolescent.
